### **SPE White Paper Presented at OTC for a New Approach to Sand Removal**

Calgary, Alberta, Canada—04/04/08—Enerscope Systems Inc., a leader in solids from liquid filtration systems for the Oil & Gas industry, announces the presentation of the SPE technical paper at this year's Offshore Technology Conference (OTC) in Houston, Texas on May 5, 2008.

The technical paper, "New Approach to Sand Removal", describes an enhanced design approach for sand removal systems and produced water treatment systems as well as lessons learned from pilot studies and installations on semi-submersible platforms and FPSO platforms in the Campos Basin.

The design of this system and this approach is the first tested and utilized in offshore production in Brazil. The paper concludes that this alternative approach to continually keeping production separators desanded, merits the recognition of a viable alternative design approach. In addition, this new approach offers new solutions to increasing production while reducing production costs and meeting environmental responsibilities for offshore businesses globally.

#### About Enerscope Systems Inc.

Enerscope Systems Inc. is a Canadian-based company with a global reach, supplying filtration, separation, and purification equipment to the Oil & Gas industry.
